Replacing the front glass

Product code 51199 contains:	1 front glass
The following tools are needed:	Flat nose pliers or similar tool
	An allen key
	Tool to mount the bauart spring, buy here.

How to replace the front glass step by step:

- Open the door.
- Dismount the bauart spring with a pair of pliers or the special tool.
- Remove the screw from the bottom hinge and dismount the door.
- Place the door face down on a soft material to protect the paint.
- Dismount the lists at the top and bottom which hold the glass in place. After a period of exposure to heat, it might be necessary to use some rust-dissolving oil to loosen the screws.
- Remove the glass and mount the new glass. Please note: We recommend that you change the gaskets when exchanging the glass.
- Remount the lists at the top and bottom which hold the glass in place. Avoid any direct contact between the steel parts and the glass.
- Position the door in place and mount the screw in the bottom hinge.
- Remount the bauart spring. However, this is only mandatory in Germany.

Hereafter you can use your stove again.
